

INTERRUPTERS

VACUUM INTERRUPTERS

Morpac offers vacuum interrupters for switches up to 245 kV with full load interruption of 2000A. Vacuum bottles are stacked in series to achieve the desired voltage rating.

A three bottle unit typically used for 72.5kV applications is shown in the photo. The vacuum bottles are stacked inside the insulated housing.

Existing air disconnect switches, even other manufacturers', can be upgraded to load break switches with the addition of Morpac's vacuum interrupters.

Contact us for applications and further details.
